

Multi-Mask Imager

Always the best seats at the cinema!

By introducing the Multi-Mask Imager, Projecta is bringing the home cinema viewing experience to an unrivalled, high level. Experiencing films as though you were in a large film theatre. Projecta makes this possible in all home cinema environments, regardless of the picture size projected.

Unique features in a new type of tensioned screen:

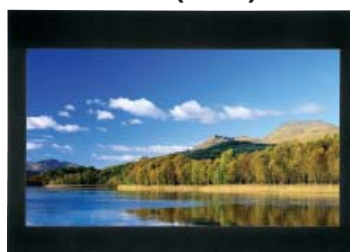

Perfect border – experience films like never before

The electrically adjustable horizontal and vertical black borders enable the projection screen to be effortlessly adjusted to picture sizes 4:3, 16:9, letterbox (1.85:1) and cinemascope (2.35:1), giving every projection a perfectly fitting matte black border for better colour contrast perception.

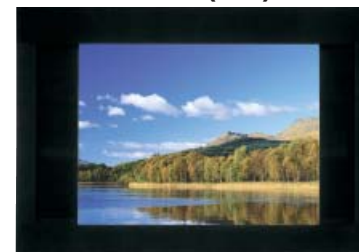

High Contrast Cinema Vision

In addition to the high-quality Matte White D projection screen fabric, the Multi-Mask Imager tensioned screen features the innovative High Contrast Cinema Vision, giving Projecta yet another absolute top quality screen fabric to add to its range. The screen fabric structure ensures higher contrast values in the darker sections of the picture, creating deeper blacks, more detail and colour and increased image clarity. Qualities which, until recently, used to be exclusively reserved for the real cinema.

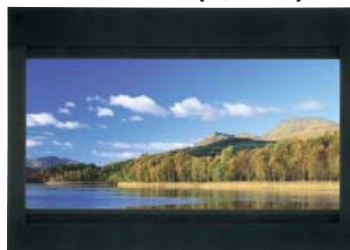

HDTV (16:9)

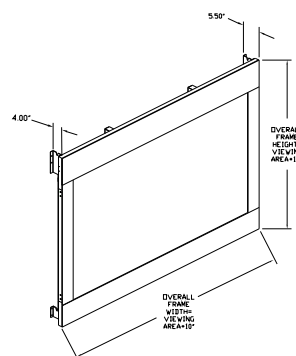

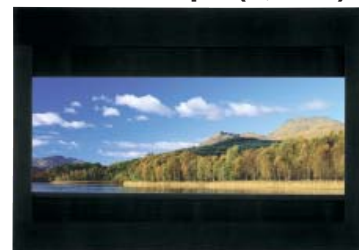

Video (4:3)

Letterbox (1,85:1)

Cinemascope (2,35:1)
